Test Description

PROMETHEUS® Celiac Genetics analyzes a patient’s genetic profile for genes specifically associated with celiac disease. Advanced high-resolution DNA probe analysis of HLA-DQ haplotypes allow for disease risk stratification depending upon which HLA genes are detected. Also, testing can predict with a 95% to 100% negative predictive value (NPV) that the patient will not develop celiac disease if HLA-DQ2 and HLA-DQ8 haplotypes are not present.

- An evaluation of genetic markers HLA-DQ2/DQ8 associated with celiac disease to assist physicians with risk assessment
- PROMETHEUS® Celiac Genetics risk stratification is only offered at Prometheus
- FDA cleared LABType® SSO typing assay used
- Specimen Requirements – 5.0 mL whole blood in EDTA / Lavender Top Tube
- Shipping Requirements - Ambient or cold pack
- Storage /Stability - 7 days ambient; 30 days refrigerated
- Turn Around Time - 3 business days from date of receipt

Laboratory Description

- Prometheus is located in San Diego, CA. Tax ID# 33-0685754 NPI# 1073642641.
- Licensed in several states including New York and California.
- This test was developed and its performance characteristics determined by Prometheus Laboratories Inc. It has not been cleared or approved by the U.S. Food and Drug Administration. Prometheus Laboratories Inc. is a CAP-accredited CLIA laboratory.

CPT Codes (as applied by Prometheus)

- 81382(x2), HLA-DQA1, HLA-DQB1
