Test Description

PROMETHEUS® TPMT Genetics helps classify patients as one of three genotypes: homozygous normal (wild type), heterozygous or homozygous recessive. Because each patient metabolizes thiopurines differently, the efficacy and toxicity of thiopurines can vary widely from patient to patient. Knowledge of the TPMT genotype may reduce time to response, allow physicians to individualize dosing, identify patients in whom thiopurine therapy should be avoided and help reduce the risk of leukopenia.

- A qualitative evaluation, to determine a patient’s genetic ability to produce the thiopurine methyltransferase (TPMT) enzyme
- **Specimen Requirements** – 2.0 mL whole blood in EDTA / Lavender Top Tube
- **Shipping Requirements** - Ambient or cold pack
- **Storage / Stability** - 10 days ambient, 30 days refrigerated
- **Turn Around Time** – 2 business days from date of receipt

Laboratory Description

- Prometheus is located in San Diego, CA. **Tax ID#** 33-0685754 **NPI#** 1073642641.
- Licensed in several states including New York and California.
- This test was developed and its performance characteristics determined by Prometheus Laboratories Inc. It has not been cleared or approved by the U.S. Food and Drug Administration. Prometheus Laboratories Inc. is a CAP-accredited CLIA laboratory.

CPT Codes (as applied by Prometheus)

- 81335 (x1) TPMT Genetics
